Title: Shopping Cart

Description: An implementation of a general shopping cart where user can add/delete items to the cart and checkout.

Actors: Admin, Seller, Customer

Functionality:

1. Customers and Sellers can sign up
2. Customers, Sellers, Admin can log in
3. Admin can create more admins
4. Admin can review sellers and approve(add) or delete them.
5. Sellers can add products and prices.
6. Customers can add products to a shopping cart
7. Customers can checkout/pay
8. Customers can view their orders
9. Customer / Seller can search for items by name
10. Admin can view all the orders

Stretch Functionality:

11. Track deliveries (Seller will update the status, yet to come up with states for delivery).
12. Sellers can add discounts.
13. Seller can also add the number of items available.
14. Notifications :
 - a. Notifications to customers about the order status
 - b. Added an item to cart but not checked out.
 - c. Notification to Seller if the item is out of stock
 - d. Notification to Seller if the item added is being bought
